

2018 Farmers Market

The market is now open from 2:30 to 6:30 pm each Wednesday throughout the summer (closed 4th of July). The Shrewsbury Farmers Market is located at the Shrewsbury Senior Center parking lot at 98 Maple Ave.

SELCO will be hosting a booth at the market on July 11th. Be sure to stop by for a fun kids craft and to learn more about our energy efficiency and electric vehicle programs. We hope to see you there!

July Holiday Hours

Independence Day | July 4, 2018
Office & Helpdesk : Closed

750kWh of Electricity

Cost as of June 1, 2018

SELCO Community Solar Ribbon Cutting

SELCO hosted a ribbon cutting event for its new solar array located on Hartford Turnpike on Friday, June 29, 2018. The SELCO Community Solar Project is a joint effort of SELCO, MMWEC, the Town of Shrewsbury, Wheelabrator, and many others. The solar array will provide clean power to Shrewsbury residents for the next 25 years. It will contribute to SELCO's carbon-free generation portfolio, which is already significantly greater than the statewide utility average. In addition to contributing carbon-free electricity, this project is an excellent reuse of the capped portion of the ash monofil located here in Shrewsbury.

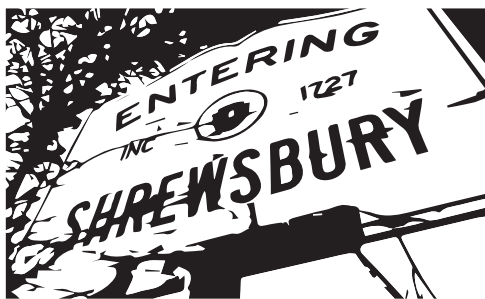

This solar array will be used as a community solar project, providing enough energy to power 400 Shrewsbury homes using an average of 750 kWh per month. SELCO customers will soon be able to opt in to receive power from this local, clean energy source.

SELCO has long embraced a mission of providing the most reliable service at the best price available. The solar project for the landfill site is keeping with this mission and is anticipated to provide power at or below the current market rate.

SELCO Sponsors Outdoor Movie Night

Join us for FREE Outdoor Movie Night in Dean Park on August 22nd at 8pm. We will be showing the family favorite Despicable Me 3. Bring a blanket and the family for this fun outdoor movie experience!

Save Energy This Summer

Fire up the Grill

Keep cooking heat outside by using your grill more this summer. Electric ovens and stove tops not only use energy, but cooking indoors can actually increase the ambient temperature in your home, making your cooling units work harder.

Beat the Heat

When possible, use fans to circulate air instead of using an air conditioner. If you are using an air conditioner, keep temperatures at 72° or higher to reduce cooling costs. Energy Star rated air conditioners use 10% less energy than non-rated air conditioners and cost about \$70 per year to run.

Bright Idea

A great way to save energy and reduce generation of excess heat in your home is to swap out hot, inefficient, incandescent light bulbs for energy efficient LEDs. LED bulbs last longer, use less energy, and remain cool to the touch!
